Sequence 1, Application US/09410399

Patent No. 6482597

GENERAL INFORMATION:

APPLICANT: Robertson, Erle S.

APPLICANT: Cotter, Murray A.

TITLE OF INVENTION: Methods to Inhibit or Enhance the Binding

TITLE OF INVENTION: to Genomic Host DNA

FILE REFERENCE: UM-03778
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1878

Total number of hits satisfying chosen parameters:

2201672 seqs, 1661799599 residues

```
No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed, s derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         December 4, 2003, 21:34:26; Search time 1074.95 Seconds (without alignments)

Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to promote endocytosis of selected cells. (Ant) agonists of (I) or Ab are used to suppress abnormal proliferation of cells that can be stimulated to proliferate by a growth factor receptor; and similar compounds (also inactive Ese mutants) can be used to prevent viral infection. Endocytosis may also be regulated, in vivo or in cell cultures, by forming an Ese-Espl5 complex, then binding dynamin to the complex. Generally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal receptor signalling, tissue development or synaptic transmission.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes mouse Esel. The present invention specifically describes mammalian Esel and 2 proteins (I) and their splice variants (Bse = EH-domain and SH3-domain regulator of endocytosis (as a complex with Espl5 protein), vesicular trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); sequences antisense to the (I) spolynucleotide; agents that downregulate expression of Ese genes or

                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                     The present invention specifically describes mammalian Esel and 2 CC proteins (I) and their splice variants (Ese = EH-domain and SH3-domain CC regulator of endocytosis). (I) are involved in regulation of clathrin-CC mediated endocytosis (as a complex with Espl5 protein) vestcular CC trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, CC mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); CC sequences antisense to the (I) polymucleotide; agents that downregulate CC expression of Ese genes or antagonists of an Ese binding partner are CC used to treat diseases associated with undesirable endocytosis and CC resulting changes in cellular function. Particularly overexpression of CC Esel is used to block clathrin-mediated endocytosis in vivo or in cell CC cultures, while administration of (I) is used to promote endocytosis of CC selected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal CC proliferation of cells that can be stimulated to proliferate by a growth CC cused to prevent viral infection. Endocytosis may also be regulated, in CC vivo or in cell cultures, by forming an Ese-Espl5 complex, then binding CC dynamin to the complex. Generally conditions that can be treated include CC cancer; abnormal cell division or migration; viral infection; or abnormal CC receptor signalling, tissue development or synaptic transmission. The present sequence represents mouse Esell-coding sequence.
                                                                                                                                                                                                                                                                                             Query Match

                                                                                   The present invention specifically describes mammalian Esel and 2 CC proteins (I) and their splice variants (Ese = EH-domain and SH3-domain CC regulator of endocytosis). (I) are involved in regulation of clathrin-CC mediated endocytosis (as a complex with Espl5 protein), vesicular CC trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, CC mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); CC sequences antisense to the (I) polynucleotide; agents that downregulate CC expression of Ese genes or antagonists of an Ese binding partner are CC used to treat diseases associated with undesirable endocytosis and CC resulting changes in cellular function. Particularly overexpression of CC Esel is used to block clathrin-mediated endocytosis in vivo or in cell CC cultures, while administration of (I) is used to promote endocytosis of CC selected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal CC proliferation of cells that can be stimulated to proliferate by a growth CC factor receptor; and similar compounds (also inactive Ese mutants) can be CC used to prevent viral infection. Endocytosis may also be regulated, in CC vivo or in cell cultures, by forming an Ese-Espl5 complex, then binding CC dynamin to the complex. Generally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal CC receptor signalling, tissue development or synaptic transmission. The present sequence represents mouse Esell CDNA sequence.
